**WORK EXPERIENCE** University of Pittsburgh Medical Center, Pittsburgh, PA  
**Systems Analyst II**, November 2006-Present

- Analyze, design and develop various reports for the EpicCare system using Clarity and KB-SQL to extract ambulatory data.
- Implement optimization projects that help correct production issues and ensure more efficient clinic workflows.
- Maintain a report management database and issue tracker application to organize existing issues and allow for the creation of a report catalog.
- Support 100 plus clinics by providing reports to support both clinical and operation needs.
- Provide direct and indirect customer service for clinic administrators to analyze and interpret the requests for new reports.

Leed's, New Kensington, PA  
**Application Developer II**, May 2005-November 2006

- Streamline mission critical order entry processes and integrate business needs into the web based order entry application.
- Manage database design, monitor performance related issues, and implement new data structures while adhering to design standards.
- Support end users and investigate issues to maintain a fast paced production environment.
- Generate ad-hoc reports and create web based reporting applications to support evolving business needs.
- Administrator of company website and directly support customer needs for a corporation that generates over \$200 million dollars per year.

University of Pittsburgh-Office of Admissions and Aid, Pittsburgh, PA  
**Graduate Student Assistant**, January 2003-April 2005  
Systems Department

- Created database driven web based applications and forms to provide information both internally and externally via the World Wide Web.
- Provided consultation services to office staff in the areas of internet content design and web application design.
- Maintained diverse proprietary applications and forms that support large volumes of critical data, such as vacation requests, inventory, and prospective student information.
- Performed database administration activities, such as developing and designing database schemas to support various applications.
